SUMMARY

Driven Software Developer and Information Science student with hands-on experience across full-stack web, desktop, and backend development. Skilled in building structured REST APIs, relational database architectures, and responsive user interfaces using TypeScript, Node.js, C#/.NET, PHP, and modern web standards. Experienced in Agile/Scrum team environments, network fundamentals, and Linux system administration.

PROFESSIONAL EXPERIENCE

01/2025 – 09/2026
Addis Ababa

HOPE worldwide ethiopia
Social Media Administrator
Managed digital presence, scheduled content, and monitored community engagement metrics to maintain steady online outreach.

EDUCATION

09/2023 – 07/2026
Addis Abeba

Information system
Addis Abeba University
B.Sc . in Information Science | Addis Ababa University
- Key Coursework: Object-Oriented Systems Analysis & Design, Database Systems, Computer Networking & Security, Data Structures & Algorithms, System Administration.

Degree Studies in Accounting | Alpha University College
Concurrent Degree Program

SKILLS

TECHNICAL SKILLS
TypeScript, JavaScript, C#, PHP, SQL, HTML5, CSS3/SCSS
MySQL, SQL Server, PostgreSQL
Git, GitHub, Linux (Red Hat/Ubuntu), Postman, VS Code
Scrum/Agile, Object-Oriented Analysis & Design (OOSAD)

Soft skill
Cross-Functional Communication
Teamwork & Pair Programming
Technical Writing & Documentation

PROJECTS

Procurement Tracking System (Backend) | TypeScript, Node.js, Express, Prisma ORM
- Contributed to a backend service designed to track and manage organizational procurement workflows.
- Implemented relational schema modeling and database queries using Prisma ORM.

- Structured modular routes and controllers adhering to clean architecture standards and resolved build/type-checking bottlenecks.

Server Health Monitoring & Automated Backup Tool | JavaScript, Node.js, Shell / System Tools

- Developed key features in an Agile team setting to monitor essential server health metrics and resource usage.
- Implemented automated routines for scheduled file and database backups to ensure data persistence and reliability.
- Built interface components to display real-time statuses and execution logs for system administrators.
